### High Productivity, Low Maintenance Thermal Plate Processing

The MacDermid LAVA<sup>®</sup> Plate Processing System is a thermal platemaking system designed to improve productivity and workflow when processing photopolymer plates. Thermal plate processing eliminates solvents and VOCs from the platemaking process for a more environmentally friendly process.

The LAVA Plate Processing System is engineered and manufactured in the USA. The system incorporates an internal filter system, vapor management system, durable sub-frame, an automated lift lid, ultra-modern motors, and LED illumination. This system is specifically designed to process MacDermid's high quality photopolymer plates, resulting in press-ready plates in less than an hour.

The LAVA NW-M is designed for narrow web to mid-web applications and is suitable for processing MacDermid printing plates from 25 in x 30 in (635 mm x 762 mm) up to 36 in x 48 in (914 mm x 1,219 mm).
